07/12/2016
Egypt Household International Migration Survey 2013 (EGYPT-HIMS) is a part of the internationally coordinated ‘Mediterranean Household International Migration Survey’ (MED-HIMS) in collaboration with the EC/Eurostat /MEDSTAT, the World Bank, ILO, UNFPA, UNHCR, IOM, WHO and LAS.

which is a programe of regionally coordinated surveys requested by the NSOs of 8 MENA Arab countries.
• partnerships between the Central Agency for Public Mobilization & Statistics (CAPMAS) and international organization for implementing Egypt-HIMS

• The successful implementation of the Egypt-HIMS would not have been possible without the active support and dedicated efforts of a large number of organizations and individuals. On behalf of CAPMAS:
2. The main objective

To overcome the lack of data on international migration from Egypt by collecting reliable and representative data on:

- determinants & consequences of international migration
- the recent trends
- causes
- dynamics
- the inter-linkages between migration and development.
The Egypt-HIMS utilized the following six questionnaires:

1. Household Questionnaire
2. Individual Q. for Current Migrant
3. Individual Q. for Return Migrant
4. Individual Q. for Non Migrant
5. Individual Q. for Forced Migrant
6. Household Socio-economic Characteristics Questionnaire
Training of Field Staff

- Training of field staff took place over a four-week period by senior experts from CAPMAS and MED-HIMS for a total of 210 field staff.
Data Collection

• Fieldwork for the 2013 Egypt-HIMS was carried out by 32 interviewing teams, each consisting of one male supervisor, one field editor, three female interviewers, and one driver.

• Data collection was implemented in two phases:
  ✓ The first covered the main sample of Egyptian households.
  ✓ The second phase covering the targeted sample of forced migrants residing in Egypt.
Data Management

• Data processing began shortly after fieldwork commenced.
• Data processing consisted of office editing, coding of open-ended questions, data entry, editing of computer-identified errors.
• Data entry and verification was done using the CSPro computer package.
• The tabulation of the survey data was done using a special computer package developed at CAPMAS.
Coverage (The Main Sample):

• The sample for the 2013 Egypt-HIMS (90116 Households) was designed to provide statistically reliable estimates of population and migration indicators.

• Six major subdivisions (Urban Governorates, urban Lower Egypt, rural Lower Egypt, urban Upper Egypt, rural Upper Egypt, and the Frontier Governorates),

• Forced migration of citizens of other countries residing in Egypt, who registered with the UNHCR in Egypt.
Summarized results of the Egypt-HIMS survey:
